

The Journey of Pain to Peace

55-year-old Nagalaxmi, who was bedridden for one month due to **ACUTE OSTEOPOROTIC WEDGE COMPRESSION FRACTURE OF L1 Vertebra**, consulted Vydehi Pain clinic for her unbearable back pain. Along with this, she had a history of Ischemic heart disease, stroke, and **ACUTE ON CHRONIC KIDNEY DISEASE** with **CREATININE 3.9**.

Therefore, a high-risk **VERTEBROPLASTY** procedure was successfully performed on her at Vydehi Pain Clinic. This advanced percutaneous procedure was done entirely under **LOCAL ANAESTHESIA**, and only 2ml of contrast dye was used to prevent contrast-induced Nephropathy. With excellent pain relief, she started ambulating the very next day.

Listen to the real story of Nagalaxmi...
