

# Testimonial of Successful Neurosurgery by Vydehi Hospital

We can't even imagine the days when we are depending on someone else for our daily activities laying like a breathing object on a bed. We feel scary. But this 64years old man from West Bengal was bedridden for almost two months looking for someone to help him in his routine activities. Jamat Ali Molla, from Bhagirathi Shiapus, developed gradual weakness in all four limbs due to a Spiral cord tumor in his neck. He was confined to a wheelchair for two months. He approached the Vydehi Institute of Medical Sciences and Research Centre with the hope of gaining back his locomotion. He underwent an excision of the tumor and has recovered and has shown significant improvement post-operation. He started walking independently and was able to do all his daily activities on his own within two weeks of Surgery.
